Course Description

(0-3-0-48-1) Study of the concepts and principles necessary to perform basic nursing skills for care of diverse patients across the life span; demonstrate competence in the performance of nursing procedures. Content includes knowledge, judgment, skills, and professional values within a legal/ethical framework.

Course Pre-requisites, Co-requisites, and/or Other Restrictions

Pre-requisites: BIOL 2301/2101 or 2401 & 2302/2102 or 2402; MATH 1314 or MATH 1342.

Co-requisites: RNSG 1423 must be taken concurrently with RNSG 1119 and RNSG 1360.

Restrictions: A grade of "C" (74.5) or better is required to progress onto Nursing 2 courses.

Course Placement: First semester of the nursing program. Acceptance to the nursing program required.

End of Program Student Learning Outcomes

Member of the profession

- 1.1 Demonstrate professional attitudes and behaviors.
- 1.2 Demonstrate personal accountability and growth.

1.3 Advocate on behalf of patients, families, self, and the profession.

Provider of patient-centered care

- 2.1 Use clinical decision-making skills to provide safe, effective care for patients and families.
- 2.2 Develop, implement, and evaluate teaching plans to meet the needs of patients and families.
- 2.3 Integrate a caring approach in the provision of care for diverse patients and families.
- 2.4 Perform skills safely and correctly in the provision of patient care.
- 2.5 Manage resources in the provision of safe, effective care for patients and families.

Patient safety advocate

- 3.1 Implement measures to promote a safe environment for patients, self, and others
- 3.2 Formulate goals and outcomes to reduce risk using evidence-based guidelines.

Member of the health care team

- 4.1 Initiate and facilitate communication to meet the needs of patients and families.
- 4.2 Collaborate with patients, families, and health care team members to promote quality care.
- 4.3 Function as a member of the interdisciplinary team.

Course Outcomes

- Integrate theoretical concepts related to fundamental skills of nursing
- Demonstrate correct procedures for fundamental nursing skills
- Apply principles of physical examination and demonstrate correct examination techniques
- Demonstrate correct medication administration procedures
- Identify therapeutic equipment and appropriate use
- Demonstrate correct procedures for obtaining vital signs and other examination measurements
- Integrate concepts of clinical decision making
- Apply evidence-based practices
- Demonstrate adherence to established safety standards

SCANS Skills: When taken concurrently with RNSG 1423 and RNSG 1360, the following skills will be achieved:

Workplace Competencies

- 1. <u>Resources: Identifies, organizes, plans, and allocates resources</u> Students in RNSG 1119 have to be able to manage the care of one client and organize their time in the clinical setting to complete the objectives of the clinical assignment. Students assign themselves to a group of 3-4 students to practice skills in the laboratory. Peer evaluation is used as a learning strategy.
- 2. <u>Interpersonal: Works with others</u> Students in RNSG 1119 must learn to work in groups for the achievement of goals. This learning is also reflected in the student's ability to work with the healthcare team.
- 3. <u>Information: Acquires and uses information</u> Students in RNSG 1119 must learn to access all available information sources in order to collect data including the Internet, patient record, physician record and peer reviewed nursing journals. They must be able to evaluate what information is pertinent to solve patient problems and deliver appropriate nursing care. Students must learn to use the information for communicating therapeutically to clients and documenting on client records and clinical assignments.
- 4. <u>Systems: Understands complex inter-relationships</u> Students in RNSG 1119 must be able to demonstrate that they understand the operations of various healthcare delivery systems, especially nursing services. Students must become familiar with managed care, a system of health care that provides a generalized structure and focus when managing the use, cost, quality and effectiveness of health care services.
- <u>Technology: Works with a variety of technologies</u> Students in RNSG 1119 are introduced to a variety of technology in the healthcare system. They must learn to use information technology for information handling. Students must analyze, store, retrieve and/or manage data and information needed by nurses in providing care to individual clients.

Foundations Skills

1. Basic Skills: Reading, Writing, Math, Listening and Speaking

Students in RNSG 1119 are required to complete nursing care plans and physical assessments. Students must also demonstrate mastery with dosage calculations by completing an exam with 90% accuracy.

- 2. <u>Thinking Skills: Creative thinking, problem solving, visualizing relationships, reasoning and learning</u> Students in RNSG 1119 are required to demonstrate reflective and critical thinking by being inquisitive, honest in facing personal biases, and prudent in making judgments. The students must develop a value system of right and wrong that helps the student with affective behavioral skills.
- 3. <u>Personal Qualities: Responsibility, Sociability, self-management, integrity and honesty</u> Students in RNSG 1119 must learn to actively participate in the process of gaining knowledge. They must transition from the passive to active learner role. They must come to class prepared to engage with the content while interacting with faculty and fellow students in planned learning activities.

Methods of Instruction

- 1. Lecture/discussion
- 2. Group Process Role Play
- 3. Simulated client situations
- 4. Study Groups
- 5. Audio-Visual Materials
- 6. Computer programs

- 7. Required Textbooks
- 8. Instructor Student Conferences
- 9. Lab Skill Practice and demonstration

Methods of Evaluation

Successful completion of RNSG 1119 is based upon the following criteria:

- 1. Achieve 90% on a pharmacological math test (3 attempts within specified time frame -see RNSG 1423 calendar).
- 2. Satisfactory return demonstration of the following designated skills:
 - a. Hygiene Care, Bedmaking and Proper Body Mechanics
 - b. Proper Positioning of clients
 - c. Draining urine from urinary bag and obtaining specimens
 - d. Discontinuation of urinary catheter and IV catheter
 - e. Basic Dressing Change
- 3. Satisfactory check-off of the following critical skills: (two attempts only)
 - f. Handwashing
 - g. Vital Signs
 - h. Physical Assessment
 - i. Non-parenteral Medication Administration
 - j. Parenteral Injection Medication Administration

Skills Lab Evaluation

(Revised 12/2020)

All skills demonstrations (checkoffs), study module / practice sessions and assignments must be satisfactorily completed within the designated time frame. A passing lab grade includes successful demonstration of skills. Students in all nursing courses are allowed two (2) attempts at successful skill check-off demonstration. Each check-off must be completed within thirty (30) minutes. Students will be given an option for a five-minute warning. Students who are unsuccessful on the first check-off attempt must wait until at least the following day to perform the second attempt. The second check-off demonstration within the two attempts may result in the student failing the course or course withdrawal, and the student will not be eligible to participate in clinical experiences. A student who fails an ADN skills lab will be considered for re-entry based on faculty and Admission, Retention, & Graduation committee recommendations, and available space Refer to readmission policy).

Course Grade Policy

1. RNSG 1119 is a pass/fail course.

Course & Instructor Policies

Skills Lab Attendance

Regular attendance is required for accomplishment of the ADN program's goals and outcomes. The ADN program adheres to the *Grayson College Student Handbook* attendance policy. Should tardiness or absences occur which do not allow for full evaluation of student performance (quality and consistency) faculty will be unable to assign a passing grade.

- 1. Students are required to attend all lab classes on time, bring lab supplies and daily paperwork, and remain in lab for the full class period.
- 2. Students are expected to arrive on time for scheduled skills labs. Being tardy for a lab will be considered as a lab absence. Tardy is not being present at the time the instructor begins class.
- 3. Students who must be absent from a lab are required to make arrangements prior to the assigned lab with the designated lab instructor.
- 4. Students who miss a scheduled lab class will be required to complete assigned work and submit documentation of the completed work by a designated date. The student who does not submit this documentation by the designated date will be penalized.

Please refer to your ADN Student Handbook for additional information/policies on attendance.

Student Conduct & Discipline

Refer to Grayson Nursing Student Handbook for policies and procedure.

Grayson College campus-wide student policies may be found on our Current Student Page on our website: http://grayson.edu/current-students/index.html

Academic Integrity

Refer to the Grayson Nursing Student Handbook for policies and procedure.

The faculty expects from its students a high level of responsibility and academic honesty. Because the value of an academic degree depends upon the absolute integrity of the work done by the student for that degree, it is imperative that a student demonstrate a high standard of individual honor in his or her scholastic work.

Scholastic dishonesty includes but is not limited to cheating, plagiarism, collusion, and the submission for credit of any work or materials that are attributable in whole or in part to another person, taking an examination for another person, any act designed to give unfair advantage to a student or the attempt to commit such acts. Plagiarism, especially from the web, from portions of papers for other classes, and from any other source is unacceptable and will be dealt with under the college's policy on plagiarism (see GC Student Handbook for details). Grayson College subscribes to turnitin.com, which allows faculty to search the web and identify plagiarized material.

Plagiarism is a form of scholastic dishonesty involving the theft of or fraudulent representation of someone else's ideas or words as the student's original work. Plagiarism can be intentional/deliberate or unintentional/accidental. Unintentional/Accidental plagiarism may include minor instances where an attempt to acknowledge the source exists but is incorrect or insufficient. Deliberate/Intentional plagiarism violates a student's academic integrity and exists in the following forms:

- Turning in someone else's work as the student's own (such as buying a paper and submitting it, exchanging papers or collaborating on a paper with someone else without permission, or paying someone else to write or translate a paper)
- Recycling in whole or in part previously submitted or published work or concurrently submitting the same written work where the expectation for current original work exists, including agreeing to write or sell one's own work to someone else
- Quoting or copy/pasting phrases of three words or more from someone else without citation, Paraphrasing ideas without citation or paraphrasing incompletely, with or without correct citation, where the material too closely matches the wording or structure of the original
- Submitting an assignment with a majority of quoted or paraphrased material from other sources
- Copying images or media and inserting them into a presentation or video without citation,
- Using copyrighted soundtracks or video and inserting them into a presentation or video without citation
- Giving incorrect or nonexistent source information or inventing source information
- Performing a copyrighted piece of music in a public setting without permission
- Composing music based heavily on someone else's musical composition.

Student Responsibility

You have already made the decision to go to college; now the follow-up decisions on whether to commit to doing the work could very well determine whether you end up working at a good paying job in a field you enjoy or working at minimum wage for the rest of your life. Education involves a partnership that requires both students and instructors to do their parts. By entering into this partnership, you have a responsibility to show up for class, do the assignments and reading, be engaged and pay attention in class, follow directions, and put your best effort into it. You will get out of your experience here exactly what you put into it – nothing more and nothing less.

Disability Services

The ADN faculty recognizes that, in specific circumstances, students in the ADN program may require modifications. This policy is consistent with the Rules & Regulations Relation to Professional Nursing Education, Licensure & Practice, Texas Board of Nursing, and with the Americans with Disabilities Act (ADA). Please refer to Grayson College's policy regarding student accommodations, the Grayson College Student Handbook, or refer to the website: www.grayson.edu for more information.

In case of inclement weather, emergency closings, or other unforeseen disruptions to scheduled classes, student must log onto their Canvas accounts for directions on where or how to continue their coursework. The schedule is subject to change with fair notice and will be made through Announcements in the Canvas accounts.

TITLE IX

GC policy prohibits discrimination on the basis of age, ancestry, color, disability, gender identity, genetic information, national origin, race, religion, retaliation, serious medical condition, sex,

sexual orientation, spousal affiliation and protected veterans' status.

Furthermore, Title IX prohibits sex discrimination to include sexual misconduct: sexual violence (sexual assault, rape), sexual harassment and retaliation.

For more information on Title IX, please contact:

- Dr. Molly M. Harris, Title IX Coordinator (903)463-8714
- Ms. Logan Maxwell, Title IX Deputy Coordinator South Campus (903) 415-2646
- Mr. Mike McBrayer, Title IX Deputy Coordinator Main Campus (903) 463-8753
- Website: http://www.grayson.edu/campus-life/campus-police/title_ix-policies.html
- GC Police Department: (903) 463-8777- Main Campus) (903-415-2501 South Campus)
- GC Counseling Center: (903) 463-8730 For Any On-campus Emergencies: 911

******Grayson College is not responsible for illness/injury that occurs during the normal course of classroom/lab/clinical experiences.

******These descriptions and timelines are subject to change at the discretion of the Professor(s).

** Grayson College campus-wide student policies may be found at the following URL on the College website: <u>https://www.grayson.edu/currentstudents/Academic%20Resources/index.html</u>

Required Textbooks

Required Textbooks for RNSG 1119 Spring 2021

Taylor's Fundamentals of Nursing Brunner & Suddarth: Medical/Surgical Nursing Ricci, Kyle, & Carmen: Maternity and Pediatrics

Online Assignments

Assignments from online resources must be completed by designated date for successful course completion.

Math Application Objectives

Students are responsible for objectives listed under their current semester level in addition to all previous semester(s).

Level I

- 1. Interpret & properly express metric and household notations.
- 2. Convert from one unit to another within the same system of measurement.
- 3. Convert units of measure from one system of measurement to another system of measurement (metric and household).
- 4. Interpret drug labels and calculate prescribed dosages.
- 5. Interpret drug prescriptions and standard abbreviations.
- 6. Calculate the number of tablets, capsules or volume of liquid for prescribed oral dosages.
- 7. Calculate the amount of a drug to be administered per pound or kilogram of body weight.

Level II

- 8. Calculate the volume of a liquid for injection administration.
- 9. When given specific diluents information for drug reconstitution, calculate the volume to be administered.
- 10. Select the appropriate syringe for a calculated volume for parenteral administration.
- 11. Express a calculated answer by selecting the correct calibrated line on a syringe.
- 12. Calculate the rate of direct IV infusions.
- 13. Recognize the calibration or drop factor of IV administration sets.
- 14. Calculate the flow rate in drops per minute, and/or ml/hr. of a prescribed amount of intravenous fluid.

Level III & IV

- 15. From a given label and/or hypothetical situation, select the information needed to calculate the medication dosage.
- 16. Recognize the reasonable amount of drug to be administered.
- 17. Appropriately label a multi-use vial following reconstitution.
- 18. From a ml/hr. setting, calculate the units/hr. delivered. (Ex: heparin, pitocin)
- 19. For a given dosage/time order (ex: mg/min) calculate the flow rate in ml/hr. or gtts./min.
- 20. Convert IV's with additive medications to mg/hr. or mg/min. to check for therapeutic dosage ranges.
- 21. Demonstrate accurate titration of medications based on a nomogram or other given parameters.
- 22. For a given IV dosage ordered by weight per minute (mcg/kg/min), calculate the correct flow rate in ml/hr or gtts/min.
- 23. For a given IV delivery rate (ml/hr), calculate the equivalent mg/hr, units/hr; or units/mg) dosage

Pharmacologic Math: Medication Dosage Calculation

Instructions for rounding will be included on all nursing exams that contain pharmacologic math questions. The instructions will be specific to the medication dose being calculated.

These general rules must be used for correct dosage calculation and documentation:

(These rules will <u>not</u> be included in exam rounding instructions: memorize these rules!!)

- <u>Do not</u> use trailing zeros after a decimal point. Example: X mg. (correct) X.0 mg. (incorrect)
- <u>Do</u> use a leading zero prior to a decimal point. Example: 0.X mg. (correct) .X mg. (incorrect)
- Do not round until the very last step in the calculation.

Other helpful guidelines:

Tablets

Tablets are most frequently administered whole or cut in half. Occasionally, tablets may be cut in quarters. Follow standard rounding rules to determine the most accurate dose.

Oral liquids

Round according to the measuring device being used

3 mL syringe

Calibrated in tenths of a mL, so doses should be rounded to the nearest one decimal point.

Use for doses greater than 1 mL. Examples: 1.25 mL = 1.3 mL2.67 mL = 2.7 mL

Tuberculin syringe

Calibrated in hundredths of a mL, so doses should be rounded to the nearest two decimal points.

Use for doses less than 1 mL. Examples: 0.536 mL = 0.54 mL0.695 mL = 0.7 mL

Intravenous fluids

May be administered in drops/minute or mL/hour

When calculating drops/minute: round to the nearest whole number

When calculating mL/hour: round according to the capability of the infusion pump (may be to a decimal point).

LAB MAKE-UP PERMIT

Student: ______ has my permission to make up the

_____(Skill) Lab. This lab must be completed by ______(Date).

Signature of Lab Instructor

I understand that it is my responsibility to make an appointment with another lab instructor and attend the required lab.

Signature of Student

This student attended my lab session and has successfully completed the required skill. Comments:

Signature of Make-Up Lab Instructor

Grayson College Associate Degree Nursing Health Science Lab

Lab Orientation

Please do not eat in any part of the lab, keep lids on drinks, and leave at tables.

Lab Hours: Monday through Friday, 7am-3pm

Please notify lab personnel of any problems with computers or other lab equipment.

<u>ALWAYS SIGN IN on the sign in sheet in Practice Room if it is **NOT** your scheduled lab time.</u> Your use of the Lab for practicing skills, or studying is important to your instructors. Signing in on the log allows your instructor to know you have been using the lab.

- 1. Lab is open for practice, follow Mrs. Wall's instructions on how to sign up for practice lab time, practice room is always open 7-3 unless checkoffs are occurring.
- 2. Use of the computers for Internet research and other studies is available in the computer lab, **printing** is not available.
- 3. Please leave computers on, do not add or remove any programs on computers.
- Please leave manikins in the same way, you as an individual would like to be left. <u>Example</u>: covered up, pulled up in bed, bedside table within reach. (If you have extra supplies you are planning to throw away, please place them on the large cabinet in lab.
- 5. You may use pencils **only** around manikins. No pens to bedside.

6. Please ask for an IV arm if you are practicing IV insertion, do not use mannequins for this skill. Also, if you are needing the Chester chest, we have several of these.

7. There is **bleach** in the IV fluids hanging at the bedside, so be careful not to get on your clothes.

8. Please do not use any betadine products on the mannequins, use the simulated swab-sticks when practicing. Also, do not use the lubricant that comes in your kits, use the lubricant located in lab for practicing skills.

9. During your simulation clinical, you will see a short video that will give you more details about the use of the simulators and equipment.

10. Please allow the drain bag for the IV fluids to hang on the back of the bed, do not place on bed.

Grayson College Associate Degree Nursing RNSG 1119

Lab 1: Lab Kit, Handwashing Checkoff, Transfers, & Hygiene (1/20 & 1/21/2021)

Objectives

- 1. Discuss essential resources for success in the nursing program.
- 2. Demonstrate the procedure for proper hand washing.
- 3. Demonstrate safe techniques when transferring, repositioning, and lifting patients.
- 4. Demonstrate the correct procedure for making an unoccupied and occupied bed.

Content	Learning Activities:
Go over lab kit supplies	Go over lab kit content
Handwashing check off	Preparation: Read & view PRIOR to lab! Hinkle & Cheever:
Pyxis access	Read: p. 2129-2130 & Chart 71.1: Hand hygiene methods
Sensory Worksheets	Taylor, Lynn, & Bartlett: Read: p. 603-604 Hand hygiene
Hygiene Care	p. 1151-1158 body mechanics, transfers, & patient
Pericare	positioning Ch. 31 p. 984-1040
Applying/changing adult brief	Skills checklists:
	p. 1018: Skill 31-1
Bed making	1022: Skill 31-2
Unoccupied	1026: Skill 31-3
Occupied	1029: Skill 31-4
1	1032: Skill 31-5
Bedpan placement	Assignments in the Point:
	Watch & Learn: Performing Hand Hygiene
Body Mechanics/Repositioning	Watch & Learn: Making an Occupied bed
	Watch & Learn: Providing a Bed Bath
	Providing Oral Care for the Dependent Patient
	Nursing Skills:
	Hygiene
	Perform bed bath on mannequin
	Peri-care station
	Making the Occupied Bed
	Making the Unoccupied Bed
	Assisting the Client to Use Bedpan
	Review Body Mechanics-Activity
	Utilizing Safe Lifting Practices,
	Moving Client up in Bed
	Body Mechanics-Activity
	Utilizing Safe Lifting Practices,
	Moving Client up in Bed, Transforming Client Between Bed and Chain
	Transferring Client Between Bed and Chair
	Sara Steady
1	

Activity: Body Mechanics

- 1. Demonstrate proper body mechanics when lifting a patient in bed and when transferring a patient from the bed to a chair. Use a gait belt.
- 2. Demonstrate how to use the Sara Steady transfer device (still must have gait belt on patient.
- 3. In pairs, practice lifting a patient in bed and transferring a patient from the bed to the chair using proper body mechanics. _____ Evaluator's Initials
- 4. In pair with another pair of students, practice logrolling a client in bed. _____ Evaluator's Initials
- 5. In pair with another pair of students, practice repositioning a client in bed and placing a bedpan under each other while lying in bed. _____ Evaluator's Initials for repositioning _____ Initial for bedpan

Grayson College Associate Degree Nursing RNSG 1119 Skill Performance Checklist: Hand Hygiene

Student _____ Date____

 Time started _____Time ended _____Five-minute warning_____

 *Critical Items must be performed correctly for successful completion

		S	U	Comments
	1. Inspect surfaces of hands for breaks or cuts and heavy soiling.			
	2. Push wristwatch and clothing sleeves above wrists.			
	3. Remove rings during washing.			
	4. Stand in front of sink, keeping hands and clothing away from sink surface.			
	5. Turn on water and regulate to a warm temperature.			
	6. Avoid splashing water onto clothing.			
	7. Wet hands and wrists thoroughly under running water. Keep hands and forearms lower than elbows during washing.			
	8. Apply a small amount of soap and lather thoroughly.			
*	9. Wash hands using plenty of lather for at least 10-15 seconds. Interlace fingers and rub palms and back of hands with circular motion at least 5 times each keeping fingers down.			
*	10. Clean fingernails with additional soap or orangewood stick.			
*	11. Rinse hands and wrists thoroughly, keeping hands down and elbows up.			
*	12. Dry hands thoroughly from fingers to wrists and forearms with paper towel			
	13. Discard paper towel in proper receptacle.			
*	14. Turn off water faucet, using clean dry paper towel. Avoid touching handle with hands.

Skills Competency Worksheet Bedside Care

This competency skills worksheet is designed to ensure competence in performing hygiene care, making occupied/unoccupied beds, and placing bedpans for clients in the health care setting. Please turn in required paperwork before leaving lab.

Activity One: Hygiene & Oral Care

Each student will perform a bed bath on the mannequin, make an occupied bed, perform oral care, and apply an adult brief.

Evaluator's Initials: _____Completed bath _____Made bed _____Oral Care _____ Apply brief

List two reasons why a bath is therapeutic to the client. 1.

2.

Activity Two: Peri care

Each student will perform peri-care on both models, male and female.

Sensory Review Worksheets

(Note: Please complete **prior** to lab)

Match the following terms related to sensations.

auditory	a. enables a person to be aware of position and movement of body parts
tactile	
	b. taste
olfactory	
	c. hearing
gustatory	
	d. smell
kinesthetic	
	e. recognition of an object's size, shape and texture
stereognosis	
	f. touch

1. Sensory overload generally occurs when a person is unable to process or manage the amount of intensity of sensory stimuli. What are the three factors that contribute to sensory overload?

a._____

b._____

с.

2. Clinical signs of sensory deprivation include:

a	
b	
d	
g	

3.	Which client	is at greatest	risk for exp	periencing	sensory overload?
----	--------------	----------------	--------------	------------	-------------------

- a. A forty-year-old client in isolation with no family.
- b. A 28-year-old quadriplegic client in a private room.
- c. A 16-year-old listening to loud music
- d. An 80-year-old client admitted for emergency surgery
- 4. Which statement indicates the client needs a sensory aid in the home?
 - a. "I tripped over the throw rug again,"
 - b. "I can't hear the doorbell."
 - c. "My eyesight is good if I wear my glasses."
 - d. "I can hear the TV if I turn it up high."

5. A hospitalized client is disoriented and believes she is in a train station. Which response from the nurse is the most appropriate?

- a. "You wouldn't be getting a bath at the train station."
- b. "Let's finish your bath before the train arrives."
- c. "Don't you know where you are?"
- d. "It may seem like a train station sometimes, but this is Valley Hospital."

6. A client with impaired vision is admitted to the hospital. Which interventions are most appropriate to meet the client's needs? Select all that apply.

- a. Identify yourself by name.
- b. Decrease background noise before speaking.
- c. Stay in the client's field of vision.
- d. Explain the sounds in the environment
- e. Keep your voice at the same level throughout the conversation.

7. A client is at risk for sensory deprivation. Which clinical signs would the nurse observe? Select all that apply.

- a. sleeplessness
- b. reduced attention span
- c. irritability
- d. drowsiness
- e. depression

8. The nurse is assessing for sensory function. Match the assessment tool to the specific sense it will be testing.

- a. identifying taste_____
- b. Stereognosis______c. Snellen chart______
- d. Identifying aromas_____
- e. Tuning fork_____

- 1. Visual
- 2. Hearing
- 3. Tactile
- 4. Olfactory
- 5. Gustatory

9. An 85-year-old client has impaired hearing. When creating the care plan, which intervention would have the highest priority?

- a. Obtaining an amplified telephone
- b. Teaching the importance of changing his position
- c. Providing reading material with large print
- d. Checking expiration dates on food packages

Grayson College Associate Degree Nursing RNSG 1119

Lab 2: Vital Signs (1/27 & 1/28/2021)

Objectives

- 1. Demonstrate the steps used in assessing body temperature, apical & peripheral pulses, respirations, blood pressure, oxygen saturation
- 2. Demonstrate accurate recording of vital signs.

Content	Learning Activities

Skills Competency Worksheet

Vital Signs

- 1. A client has been admitted with a lung infection. His vital signs indicate hypertension, tachycardia, and eupnea. Which set of vital signs support this data?
 - a. BP 150/105, pulse 123, Respirations 12
 - b. BP 90/40, Pulse 110, Respirations 28
 - c. BP 85/50, Pulse 50, Respirations 40
 - d. BP 115/84, Pulse 100, Respirations 30

2. Vital Sign Assessments at Grayson College Health Clinic:

a. Assess the blood pressure, pulse and respirations of 2 student clients and 2 GC clinic clients.

b. Obtain a temperature, oxygen saturation and orthostatic vital signs reading of only 1 student client.

Record your findings in the chart below.

	Student A	Student B	Clinic A	Clinic B
Blood Pressure				
Lying				
Sitting				
Standing				
Apical Pulse				
Respirations				
Temperature				
O2 Saturation				

3. Select one student client to assess height and weight.

4. Choose a partner and locate all peripheral pulse sites (except femoral). Check off sites below as you locate each. NOTE: you do not have to count the pulse at each of these sites, just locate them.

	Left located	Right located
Radial		
Brachial		
Carotid		
Popliteal		
Dorsalis Pedis		

5. Choose a partner and obtain an apical-radial pulse deficit on a third student.

Apical _____ Radial _____ Pulse Deficit _____

Ht_____ Wt____

Grayson College Associate Degree Nursing RNSG 1119 Skill Performance Checklist: Vital Signs

Student	Date

Time started _____Time ended _____Five-minute warning_____ *Critical Items must be performed correctly for successful completion

	Prepa	aration:	S	U	Comments
*	1. V	Verify order.			
*	2. G	ather supplies and equipment.			
*	3. P	erform hand hygiene.			
*	4. In	ntroduce self to patient.			
*	5. Ic	lentify patient with 2 patient identifiers.			
*	6. E	xplain procedure to patient.			
*	7. P	rovide privacy.			

	Pr	ocedure for obtaining blood pressure:	S	U	Comments
	1.	Remove all clothing from area where BP is to be taken.			
*	2.	Assuming use of the upper arm, locate the brachial pulse.			
*	3.	Apply BP cuff 1-2 inches above antecubital space. Place the balloon of the cuff over the brachial pulse site.			
*	4.	Locate the radial pulse.			
	5.	Inflate cuff until the radial pulse is no longer palpable and note the number.			
*	6.	Deflate the cuff and add 30 to the number from Step 5.			
	7.	Wait 2 minutes before proceeding with the BP (take other vital signs or visit with the client).			
	8.	Return to BP. Insert earpieces of stethoscope into ears and place the diaphragm side of the stethoscope over the brachial pulse site.			
	9.	Inflate the cuff to the number calculated in Step 6.			
*		Slowly deflate the cuff by 2-3 mm/Hg per second and listen for the first sound (Systolic number) and continue listening until the last sound is heard (Diastolic number).			
	11.	Remove the cuff and ensure client comfort.			

	Procedure for obtaining pulse:	S	U	Comments
*	1. Place tips of first two or middle three fingers of hand over radial pulse, along thumb side of client's inner wrist to palpate pulse. Obtain a 30 second radial pulse measurement and multiply by 2.			

	Procedure for obtaining respirations:	S	U	Comments
	1. Assist client into a comfortable position, preferably sitting or lying with chest visible.			
*	2. Place client's arm in a relaxed position across the abdomen or lower chest, or place nurse's hand directly over client's lower abdomen.			

*	3.	Using second hand on watch, count rate for 30 seconds and multiply by 2. Be		
		sure to observe for rhythm and depth.		

	Upon completion of skill:		U	Comments
*	1. Leave patient in comfortable safe position, bed in lowest position, head-of-			
	bed side rails x2, with call light within reach.			
*	2. Hand hygiene before leaving room.			
*	3. Document the procedure, including patient response.

Lab 4: Therapeutic Nursing Skills (2/10 & 2/11/2021)

Objectives

- 1. Calculate the intake and output for specific examples.
- 2. Demonstrate the correct procedure for discontinuing a urinary catheter and IV.
- 3. Identify specimen collections.
- 4. Demonstrate the correct procedure for applying and removing PPE.
- 5. Recognize a variety of hospital diets.
- 6. Identify different types of therapeutic equipment.
- 7. Discuss the purpose of the different types of therapeutic equipment.
- 8. Demonstrate the correct procedure for performing a basic dressing change.
- 9. Accurately assess wounds using length X width X depth for measurements and is able to follow prescriptions for cleaning and dressing changes of wounds
- 10. Demonstrate the correct assessment of patient in restraints

Skills Competency Worksheet Therapeutic Nursing Skills

This competency skills worksheet is designed to ensure competence in calculating intake and output, performing nursing 1 skills, collecting various specimen, understanding special diets, as well as identifying therapeutic equipment and understanding its purpose. All activities must be completed and receive signed verification by the evaluator: student or instructor.

Activity One: Apply TED hose-Rhonda

Apply and remove TED hose from mannequin.

Activity Two: Nursing 1 Skills

A. Using the graduated cylinder, empty 50mL out of the urinary drainage bag.

_____ Initials of Evaluator/Student

B. Practice the proper technique for obtaining a urine specimen from a Foley catheter.

_____ Initials of Evaluator/Student

C. Practice the removal of a Foley catheter.

_____ Initials of Evaluator/Student

Activity Three: Specimen Collection

Identify various specimen collection containers and discuss the proper collection technique for each.

А. В.

- C.
- D.
- E.
- F.
- G.

Activity Four: Isolation Patient

Using the personal protective equipment, please prepare to take care of a patient in the designated isolation. Once the student has finished applying and removing the required PPE, have the instructor verify and initial.

_____ Initials of Evaluator/Student

Activity Five: Wound Care

Choose one of the mannequin patients that has a wound. Remove the old dressing and perform a basic, dry dressing change.

_____ Initials of Evaluator/Student

Activity Six: Restraints

Appropriately release restraints on a client and have instructor evaluate actions.

Initials of Instructor

What assessment would the nurse perform while a patient is in restraints?

 1.
 5.

 2.
 6.

 3.
 7.

 4.
 8.

Activity Seven: Glucometer Practice

Appropriately demonstrate use of the glucometer. _____ Initials of Evaluator/Studen

Activity Eight: Therapeutic Equipment

Complete the activity setup by answering the therapeutic equipment questions in accordance to what is seen in the activity.

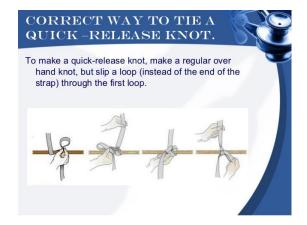

Therapeutic Equipment
Oxygenation Station
1a. What is this?
1b. What are indications for use of this device?
1c . What is the maximum amount of liters per minute for this device?
lpm
2. What is this device?
3. What is this device?
4. What is this device?
5. What does the nurse set the oxygen flow rate for this mask?lpm
6a. What is this used for?
6b. Where would the nurse apply this device?
7a. What are 3 different locations where this device can be applied for an accurate reading?
7b. What reading would need nursing intervention?
8a.
How would the nurse abbreviate the name of this equipment?
8b. How would the nurse instruct the patient to use this piece of equipment?
9. What is this device used for?
10. What are 3 important teaching aspects for a patient who wears oxygen at home?
Urinary & Bowel Station

11a. What is this used for?
11b. How often do you provide catheter care?
12.What positioning is most important for this device?
13a. When do you empty this?
13b. How should the stoma appear for the patient?
Post-Surgical Station
14. How would the nurse empty this device?
Cardiac Station
15a. What is the purpose of this device?
15b. How many leads are on this device?
15c. How often do you replace electrode pads?
16. What are risk factors for this device?
17a. How is this name of this device abbreviated?
17b. How does this device work?
17c. What specific assessment should the nurse perform before applying this device?

Grayson College Nursing Program The use of Restraints and how it relates to the Grayson Student in the clinical setting

- Students <u>will not</u> initiate, manipulate, or discontinue any form of restraint without direct supervision from the instructor or an RN that is involved in the care of the patient.
- Physical restraint is any intervention or device that prevents mobility or free movement including wrist, ankle, or waist devices; the tightly tucking of a sheet, or the use of all side rails to prevent a patient from getting out of bed.
- Federal guidelines regulate the use of restraints, but each medical facility will have specific policies that must be followed.
- It is the responsibility of the student, faculty, and nurse to know the general and specific policies related to the use of restraints before interacting with a patient in restraints.
- Students <u>may</u> assess patients in restraints and include in the assessment findings related to proper use and application of the restraint, as well as any complications.
- Assessment will include patient's medical condition, mental status, behavior, number and type of restraints, extremity range of motion, vitals, skin condition and care, frequency and time that food, fluid, and toileting is offered, safety, and education provided to client and family.
- Restraining a patient is a high risk intervention and should be implemented as a last resort. The safety of the patient is a <u>critically important</u> priority.
- > The three categories of restraint are physical, chemical, and seclusion
- Restraints place the patient in greater risk for injury and the potential for respiratory restriction, circulatory problems, or other mechanical injuries.
- Any issues, concerns, or questions about a patient in restraints encountered by the student must be immediately reported to the clinical instructor and/or the primary care nurse.

Wrist restraints must be secured in an manner that allows adequate circulation and tied in a quick release knot to the bedframe. This allows restraints to be rapidly released in an emergency. Restraints are never secured to anything that can move independantly from the patient in the bed, such as the bedrail, a table, or any object not directly connected to the bed frame.

Discuss reputable websites for Rx look up: MEDLINE PLUS Mayo.org	Hinkle & Cheever: p. 1889, Chart 63-4
	Students to bring: face shield, access to drug resource, and printed off lab worksheets including Sally Gunter orders & MAR.

Sally Gunter

Give 0900 meds- patient's blood pressure at 0830 is 162/94 and has just finished breakfast and is ready for her morning meds.

- 1. Compare HCP order sheet with MAR and put a check mark next to each med after you have verified it using the 5 rights and HCP order.
- 2. Match 5 rights with actual PRN order (excluding 6th right of documentation)

=	=
	=
	-
	-

3. What are two other items to look for before leaving this station? (Allergies & start/stop times)

Skills Competency Worksheet Medication Administration Part 1

This competency skills worksheet is designed to prepare students for performing proper non-parenteral medication administration skills in the health care setting. All activities must be completed and receive signed verification by the evaluator: student or instructor.

Activity One: Verify Medication Administration Record to HCP orders.

Activity Two: Instructor demonstrates oral medication administration for Sally Gunter.

Activity Three: Work in partners to practice medication administration. Each student will pretend to be Sally Gunter while his/her partner administers medications to him/her.

Activity Four: In partners, utilize pyxis to remove medications for Rhonda Williams and/or Anthony Johnson. Each student will perform 3 checks and administer at the bedside for designated patient, while other partner observes and evaluates you with non-parenteral medication skills performance check-off sheet.

Activity Five: Question of the Day

The client demonstrates facial grimacing when moving and just refused his PRN pain medication because it makes him "feel fuzzy." What is the appropriate nursing intervention?

- a. Insist the client take the pain medication to get better.
- b. Chart pain assessment score and client refusal of medication.
- c. Discuss reasons for refusal and call HCP for new orders.
- d. Disregard charting since the client did not take any medication.

Activity Six:

Each student will discuss with a partner and document how to instill the following:

- A. Eye drops:
- B. Eye ointment:
- C. Nasal drops:
- D. Ear drops:
- E. Vaginal medication instillations:
- F. Rectal suppositories:
- G. Metered dose or dry powder inhalers:

Medication Administration and Error Prevention Worksheets

Directions: Please complete worksheets prior to coming to lab. Circle T for True or F for False on each statement below.

- 1. In some facilities, medication orders can be written by Nurse Practitioners or Physician Assistants. T or F
- 2. PRN medication orders must include the reason for use of the drug. T or F
- 3. MAR stands for Medication Administration Report. T or F
- 4. If a patient has no armband but knows his name, you can go ahead and give medications. T or F
- 5. Medications are sometimes confused because the names or the packaging are very similar. T or F
- 6. If you have extra time, you can assist your colleagues by preparing the medications they will be giving. T or F
- 7. Critical thinking is an important aspect of preventing medication errors. T or F
- **8.** Many common abbreviations are being eliminated from the approved list as it is too easy to confuse them with another abbreviation or misread them. T or F
- 9. STAT and ASAP both mean "immediately." T or F
- **10.** Each hospital has standardized time guidelines for medication ordered as "daily" or a specific number of doses per day. T or F
- **11.** QID (four times a day) and "every 6 hours" mean the same thing. T or F
- **12.** If a medication is held, the time it should have been given must be written on the MAR and circled. T or F
- 13. If reasons for holding a medication are delineated in the order, you do not need to chart them. T or F
- 14. NPO refers to food, not to oral medications. T or F
- 15. A patient with an NG tube to low suction can still take oral medications. T or F
- 16. The nurse needs to look up any drug with which she is unfamiliar prior to administration. T or F
- **17.** Pain levels must be charted with each dose of analgesic. T or F

Answer the following questions:

- 1. What methods can be used to verify patient identity?
- 2. What are the various sources a nurse can use to verify dosages and drug compatibilities?
- 3. Why does interrupting the nurse when preparing medications make it more likely that errors will occur?

Mr. Fredericks, 68, is recovering from a recent surgical procedure. When the nurse goes in to give Mr. Fredericks his morning medications, he looks at them carefully and tells her that he only gets three medications, not four. The nurse brings the MAR and shows him that all four medications are listed. The medication in question was added last evening. Mr. Fredericks names the three medications he takes, pointing each of them out, and insists that he does not get the fourth medication.

What is the appropriate action for the nurse to take?

- a. Explain to Mr. Fredericks that this is a new order from his HCP and encourage him to take the medication.
- b. Hold the medication until the order can be verified as correct.
- c. Hold the medication and note that Mr. Fredericks refused it.
- d. Call the family and see if they can get Mr. Fredericks to cooperate.

Skills Competency Worksheet Parenteral Injections

This competency skills worksheet is designed to prepare students for performing proper parenteral medication administration skills in the health care setting. All activities must be completed and receive signed verification by the evaluator: student or instructor.

Initial the following skills after practicing with your supplies.

• Review principles for intradermal, subcutaneous, and intramuscular injections. (Use clinical injection handout)

• Review needle size, volume and angle _____

- Proper handling of equipment _____
- Drawing med from ampule _____
- Drawing med from vial _____
- Practice injecting with demo dose:

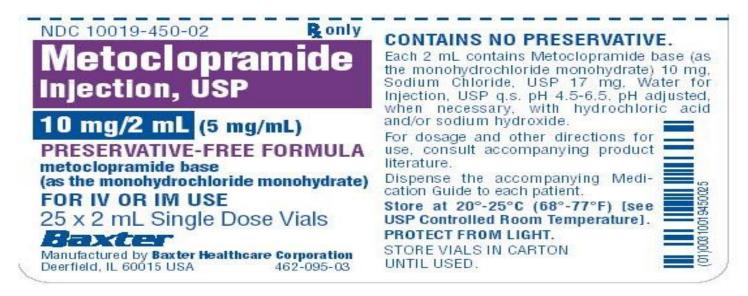

ID _____ Subcutaneous _____ IM ____

• Review and practice landmarks on mannequins/partner _____

• Review mixing insulins:

	Gauge	Length	Angle	Site
1. 6-month-old 0.5 mL IM injection				
2. 25-year-old 0.5 mL IM injection				
3. 80-year-old 0.5 mL subQ injection				
4. Heparin subQ injection				
5. 54-year-old 3 mL IM injection				
6. TB testing

Student _____ Date____

Time started _____ Time ended _____ Five-minute warning_____ *Critical Items must be performed correctly for successful completion

This is a correct technique demonstration. Please refer to Skill Performance Checklist: Medication Administration while giving injections in the clinical setting.

	Landmarks	S	U	Comments
*	1. Name the six rights.			
*	2. Assess for allergies.			
*	3. Identify the landmarks for the following:			
	a. ID			
	b. SQ			
	c. IM			

	Drawing Up Medications	S	U	Comments
	1. Determine whether the size of the muscle is appropriate for the volume of			
	medication.			
	2. Organize the equipment needed for prescribed injections.			
	3. Perform hand hygiene.			
*	4. Correctly prepare the prescribed IM injection from the vial.			
*	5. Correctly prepare the prescribed ID injection from the vial.			
*	6. Correctly prepare the prescribed SQ injection from the vial.			

	Intramuscular, Subcutaneous, and Intradermal Injections		U	Comments
	1. Apply gloves.			
	2. Clean the IM site with an antiseptic swab. Use a circular motion starting at the center and moving outward about 2 inches.			
	3. Discard the swab and allow the skin to dry prior to the injection.			
*	4. Prepare the IM injection syringe by removing the needle cover and discard without contaminating the needle.			
*	5. Insert the needle and inject medication at a rate of 10 sec/mL.			
*	6. Remove the needle after 10 seconds and activate the needle safety device or discard uncapped needle.			
	7. Apply gentle pressure with gauze. Place a band-aid before leaving room if site is bleeding.			
	8. Clean the ID site with an antiseptic swab. Use a circular motion starting at the center and moving outward about 2 inches.			
	9. Discard the swab and allow the skin to dry prior to the injection.			
*	10. Prepare the ID injection syringe by removing the needle cover and discard without contaminating the needle.			
*	11. Pull the skin taut and insert the needle at a 5-15-degree angle.			

*	12. Inject the medication slowly, producing a small wheal/bleb.	
*	13. Remove needle quickly and activate the needle safety device or discard	
	uncapped needle.	
	14. Place gauze or band-aid before leaving room if site is bleeding.	
	15. Clean the SQ site with an antiseptic swab. Use a circular motion starting at the	
	center and moving outward about 2 inches.	
	16. Discard the swab and allow the skin to dry prior to the injection.	
*	17. Prepare the SQ injection syringe by removing the needle cover and discard	
	without contaminating the needle.	
*	18. Pinch/Spread the skin (approp. per site) and insert the needle at a 45 deg or 90	
	deg angle (approp. per site).	
*	19. Inject medication at a rate of 10 sec/mL.	
*	20. Remove needle after 5 seconds and activate the needle safety device or discard	
	uncapped needle.	
	21. Apply gentle pressure with gauze. Place a band-aid if site is bleeding.	
	22. Remove gloves.	

	Upon completion of skill:	S	U	Comments
*	1. Leave patient in comfortable safe position, bed in lowest position, head-of bed			
	side rails up x2, with call light within reach.			
*	2.Hand hygiene before leaving room.

Lab 11: Introduction to IV Therapy & Medical Nutritional Therapy (4/7 & 4/8/2021)

Objectives

- 1. Identify nurse responsibilities related to an intravenous infusion.
- 2. Differentiate signs & symptoms of complications in IV therapy and nursing actions to implement when complications occur.
- 3. Identify different medical nutritional modalities and the nursing actions to implement to administer medical nutritional therapy.
- 4. Assess and maintain various equipment utilized to administer medical nutritional therapy.
- 5. Apply swallow precautions for the patient at risk for aspiration.

Content	Learning Activities
Purposes for IV therapy	READ: IV Therapy
Equipment & Safety	Hinkle & Cheever: Ch. 13, pg. 290-293
Assessment & Documentation	Taylor, Lynn & Bartlett: Ch. 29, pg. 845-857, 880-904
Nursing actions	<u>Ricci, Kyle & Carman:</u> p. 1224-1231
Complications	READ: Medical Nutritional Therapy
Discontinue peripheral IV	Hinkle & Cheever: p. 1252-1262
Purposes for MNT	Taylor, Lynn, & Bartlett: p. 1294-1332
MNT Equipment	<u>Ricci, Kyle, & Carman:</u> p. 1231-1240
Therapeutic diets	Students to bring: face shields, roll of paper tape, (1) IV catheter, (1) Tegaderm dressing 2 3/8 x 2 3/4

IV Therapy

- A. What is the purpose of the IV pump?
- B. How can the nurse implement look-check-connect with IV equipment and therapy?
- C. What is the type of IV solution in the bag?
- D. What does the nurse assess for at the saline lock site?
- E. Practice the proper technique for discontinuing a peripheral IV.

_____ Evaluator initials

- F. How does the nurse document the IV assessment findings?
- G. What is the first nursing action when a patient complains of pain at the IV site?
- H. List 3 different complications associated with IV therapy and the nursing actions for each one.
 - a.
 - b.
 - c.
- I. What position would the nurse put the patient in if suspecting an air embolism?
- J. What are the N1 students allowed to do with a PIV?

MNT Equipment

- 1a. What is this device and where is it inserted?
- 1b. Where is the end placement of this tube?
- 1c. What is this device used for?
- 1d. What type of diet is ordered for the patient with this device present?

Suction canister

2. What are 2 levels of suction this device can be set at?

PEG Tube

- 3a. What is this device and why would a patient need it?
- 3b. In what position should the patient's bed remain when receiving the feeding?

Lab 12: Practice Medication Scenarios, Sensory Alterations, Safety (4/14 & 4/15/2021)

Objectives

- 1. Participate in patient scenario to recognize common safety hazards.
- 2. Actively participates in role playing and simulation scenarios.
- 3. Discuss common sensory changes that normally occur with aging.
- 4. Participate in activity utilizing different barriers to sensory function
- 5. Contributes to the debriefing process using a positive approach.
- 6. Actively participates in reflective games that reviews nursing 1 content.

Content	Learning Activities
Medication Scenarios

Sensory Activity	

Skills Competency Worksheet Practice Medication Scenarios

This skills competency worksheet is designed to assist students in practicing medication administration skills, performing clinical decision making in simulation scenarios, identifying safety concerns, and understanding sensory changes that occur with aging adults. All activities must be completed and receive signed verification by the evaluator: student or instructor.

Activity One: Medication Administration Scenarios

Med Admin Scenario- Case 1: Andrew Knight

What actions will the nurse implement?

Med Admin Scenario- Case 2: Elizabeth Riley

What actions will the nurse implement?

Med Admin Scenario- Case 3: Susan Chan

What actions will the nurse implement?

Med Admin Scenario- Case 4: Isaiah Morris

What actions will the nurse implement?

Med Admin Scenario- Case 5: Benny Long

What actions will the nurse implement?

Activity Two: Patient Safety Scenario

A female was admitted to the hospital for nausea and vomiting yesterday. She is feeling much better at this time after receiving IV fluids and anti-emetics for her nausea. She can get up to ambulate with minimal assistance, but due to her dehydration status she is at risk for falls. Her urinary catheter had small amounts of concentrated urine in it yesterday, but the amount is slowly increasing and the urine is becoming clear yellow.

This patient's room is filled with "little errors" that can affect patient safety. Please assess these errors and write them below.

16)_	
17)	
18)	
10)	

Activity Three: Aging Activity: Sensory Deprivation in Older Client

Each of you will "experience" the aging process. Put an elbow brace on one arm and the knee brace on the opposing leg. Put eyeglasses on and ear plugs in both ears to demonstrate decreased visual acuity and hearing. Don gloves to simulate a decreased sense of touch. Add a tablespoon of birdseed to your shoes. After becoming "elderly" do the following activities.

Read from newspaper Take medications out of container Thread a needle Button a shirt Count out 27 cents and 44 cents Feed another student (apple sauce)

Write a brief description of how it feels to be "elderly." Documents thoughts and emotions in space provided below.

Math Problem

Lab 12

HCP Order: amoxicillin clavulanate/potassium 40 mg/kg daily into two divided doses Supply: See label

The client weighs 77 lbs. How many mg will you give per dose? Round to the nearest whole number.

How many mg will you give daily?____

How many mL will you give per dose? Round to the nearest whole number._____

How many mL will you give daily?____

Intake & Output Lab 12

Clear Liquid Diet

A post-op patient is on a clear liquid diet. The IV of NS is running at 100ml/hr. A urinary catheter draining amber, colored urine is present, as well as a JP drain from the abdominal incision.

Please calculate the fluid balance for this patient 1500-2300.

Dinner
¹ / ₂ cup of water
3 oz of cranberry juice
8 oz of chicken broth
³ / ₄ cup of gelatin
Took 1000 mode with 1 or of water

Took 1900 meds with 1 oz of water

Patient got nauseated after dinner. Her emesis basin had 130ml of greenish-brown liquid in it. Urinary catheter bag was emptied at 1815 with 720ml in bag and at 2210 with 625ml in bag. JP bulb was emptied at 1645 with 75ml of sanguineous drainage and later at 2215 with 65ml of drainage.

Patient had 1 small bowel movement @ 1245.

Intake	Output
Fluid Balance=	

NPO Diet

A patient with a small bowel obstruction is NPO. The IV of NS is running at 125 mL/hr. A urinary catheter draining amber, colored urine is present, as well as an NG tube draining brownish, green contents.

Please calculate the fluid balance from 1500-2300.

1700 meds were administered via NG tube with 1 ½ oz of water to flush.

Suction canister on the wall contains 320 mL of contents at 1500 and 940mL at end of shift. Foley catheter bag was emptied at 1815 with 260 mL in bag and at 2210 with 175 mL in bag.

Intake	Output
Fluid Balance=	

Lab 13: Interactive games (4/21 & 4/22/2021)

Objectives

- 1. Actively participate in games that review Nursing 1 content.
- 2. Clinical judgement activities.

Content	Learning Activities
Interactive Nursing 1 activities	Per N1 instructor.

Lab 14: Simulation- Standardized Pediatric Assessments (4/26/2021)

Objectives

- 1. Demonstrate understanding of pediatric assessment and how it varies from assessment of an adult patient.
- 2. Demonstrate performance of a thorough pediatric assessment based on patient's age of development.
- 3. Contributes to the debriefing process using a positive approach to evaluate performance and areas that need improvement.
